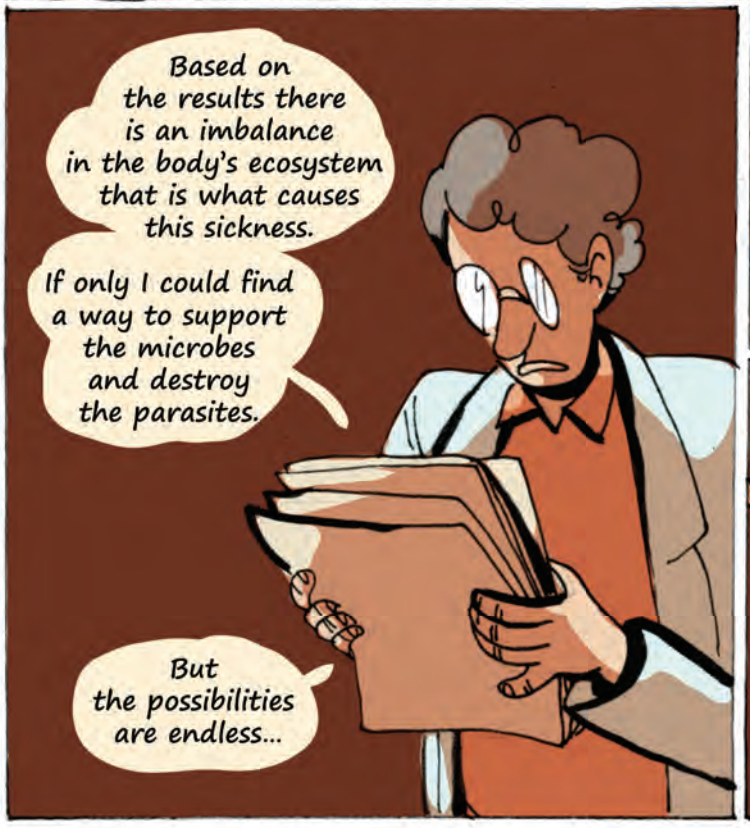
The good, the bad and supercomputer

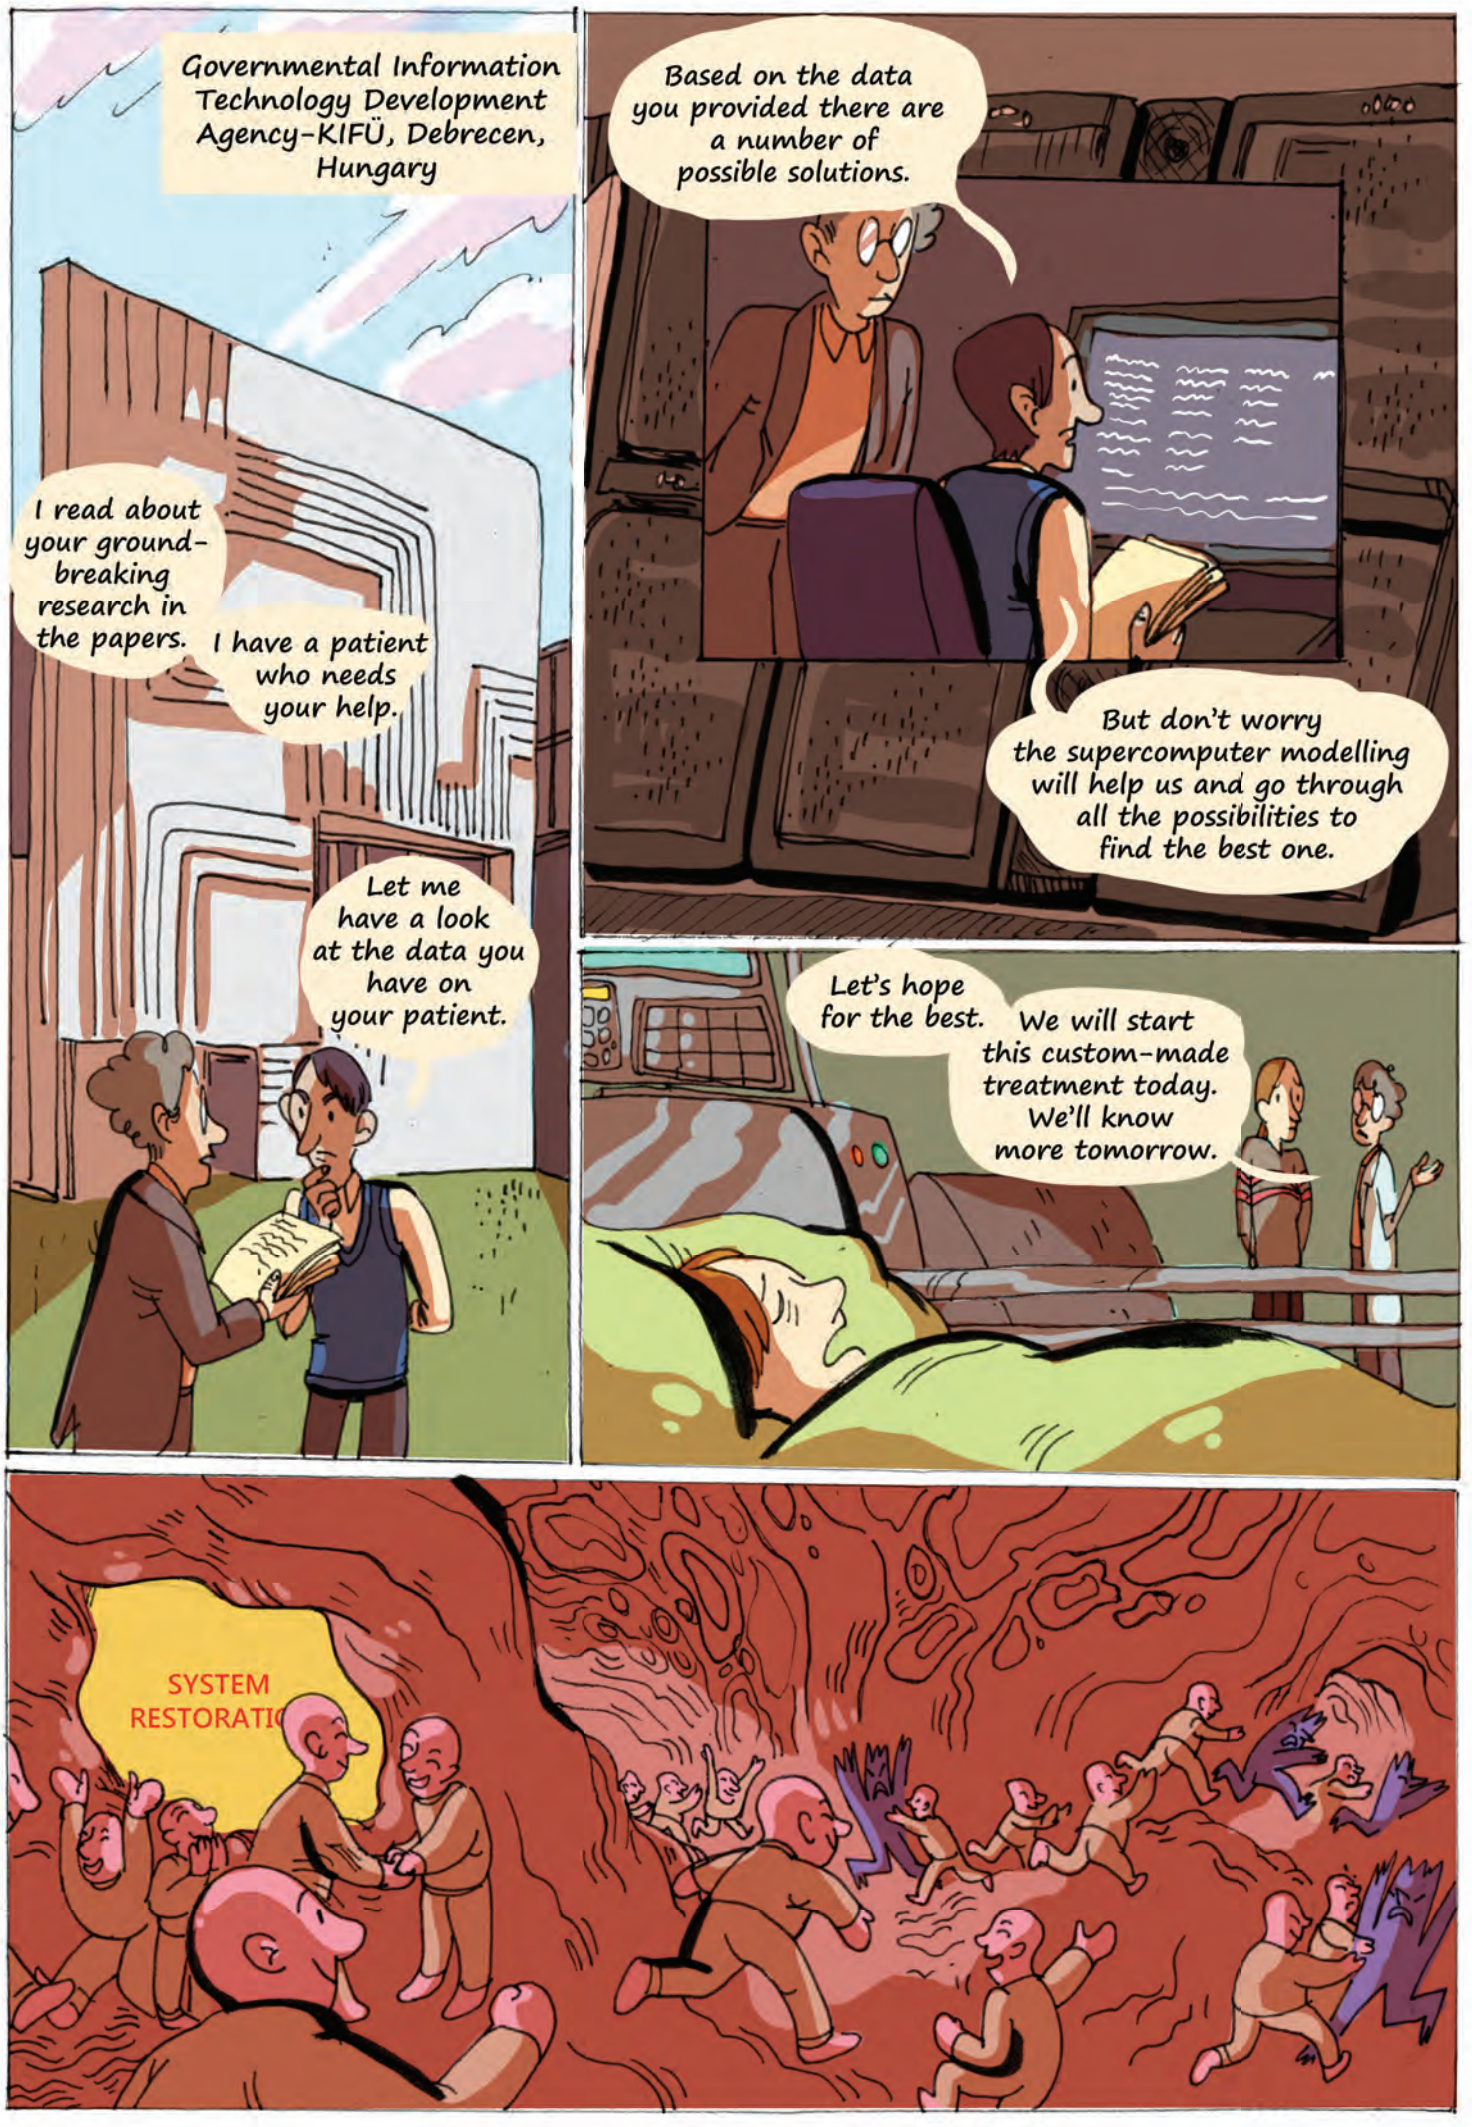
We are constantly weakening, I am not sure how long we can hold on.
We need help!
If only we could reach out to someone and get help from outside...

Thank you for seeing us. We've heard that you are a special expert in this field.
Nobody found the cure to my kid's sickness. It seems like his body is attacking itself
I cannot promise anything.
I will run some tests and we'll see what we find out.



Based on the results there is an imbalance in the body's ecosystem that is what causes this sickness.
If only I could find a way to support the microbes and destroy the parasites.
But the possibilities are endless...

Supercomputers saves lives!
This looks interesting, maybe they can help me out!



Governmental Information Technology Development Agency-KIFÜ, Debrecen, Hungary
I read about your ground-breaking research in the papers.
I have a patient who needs your help.
Let me have a look at the data you have on your patient.
Based on the data you provided there are a number of possible solutions.
But don't worry the supercomputer modelling will help us and go through all the possibilities to find the best one.
Let's hope for the best.
We will start this custom-made treatment today. We'll know more tomorrow.

The project Superheroes 4 Science is supported by the Visegrad Fund – www.visegradfund.org.
Inspired by ongoing academic research related to the modelling of the competition between microbial populations carried out by researchers of the Evolutionary Systems Research Group at the Hungarian Academy of Sciences in collaboration with researchers at the University of East Anglia in Norwich, UK.
