Designer's nightmare

Is my train safe for passengers?
Are the seats properly designed? Did I make a mistake?
TRA
DISASTER
ENGINEER'S FAULT!
I need to check if my design is correct.
But my computer is not powerful enough.
I need something like... a supercomputer!

SUPERCOMPUTER
... and my computer is not powerful enough. Can you help me?
Yes, no problem.
Together we will find out if everything is OK, and if we can improve anything.
Excuse me... I'm in a hurry to the supercomputing center!
IT4Innovations
National Supercomputing Center
Czech Republic

Simulations are regularly done on our supercomputer, which saves a lot of time and money.
Supercomputers thusly help science, research, and businesses like yours.
This colleague is a computational engineer and he will be working with you. He is experienced in mechanical engineering.
Thank you so much, now I know how to solve the problem.
Everything is ready, now I can run the tasks remotely.
TAP
The supercomputer processes the simulation.

Eureka!
I have already discovered what I need to change to stop my disasterous dream from coming true!
